

NAME

ProjectBuilder::CMS, part of the project-builder.org

DESCRIPTION

This modules provides configuration management system functions suitable for pbinit calls.

USAGE**pb_cms_get_pkg**

This function returns the list of packages we are working on in a CMS action. The first parameter is the default list of packages from the configuration file. The second parameter is the optional list of packages from the configuration file.

pb_cms_get_real_pkg

This function returns the real name of a virtual package we are working on in a CMS action. It supports the following types: perl. The first parameter is the virtual package name

pb_cms_create_authors

This function creates a AUTHORS files for the project. It call it AUTHORS.pb if an AUTHORS file already exists. The first parameter is the source file for authors information. The second parameter is the directory where to create the final AUTHORS file. The third parameter is the schema of the CMS systems (svn, cvs, svn+ssh, ...)

pb_cms_log

This function creates a ChangeLog file for the project. The first parameter is the schema of the CMS systems (svn, cvs, svn+ssh, ...) The second parameter is the directory where the CMS content was checked out. The third parameter is the directory where to create the final ChangeLog file. The fourth parameter is unused. The fifth parameter is the source file for authors information.

It may use a tool like svn2cl or cvs2cl to generate it if present, or the log file from the CMS if not.

WEB SITES

The main Web site of the project is available at <<http://www.project-builder.org/>>. Bug reports should be filled using the trac instance of the project at <<http://trac.project-builder.org/>>.

USER MAILING LIST

None exists for the moment.

AUTHORS

The Project-Builder.org team <<http://trac.project-builder.org/>> lead by Bruno Cornec <<mailto:bruno@project-builder.org>>.
